

10 August 2020**DCI secures Development Approval for new Adelaide data centre**

DCI Data Centers has secured Development Approval for South Australia's first Tier III / IV data centre.

We have completed early works and are now finalising detailed designs for our latest state-of-the-art facility. This new generation, purpose-built facility will be Adelaide's first Uptime Institute Certified data centre. It will also feature the highest levels of physical and operational security required to serve government, defence and large enterprises. We expect the facility will also set industry-leading benchmarks for water and energy efficiency.

Adelaide 2 is scheduled for service readiness in the 4th quarter of 2021 and is directed to the secure cloud edge, government and defence sectors.

DCI's Adelaide 1 data and business continuity centre – the former Bank of Adelaide facility – has been operating reliably, safely and securely for more than 20 years.
